10. Screw new filter (cartridge) in the housing top by turning the cartridge counter clockwise, **DO NOT OVERTIGHTEN**.

# Instructions for Changing Your Filter

11. Reconnect the housing top with bottom and replace Locking V-Band; replace black knob and turn until tight.
12. Be sure that the Locking V-Band is fastened tightly by:
  - a. Check the V-Band to confirm that it is secured evenly around the housing top and bottom.
  - b. Hand-tighten the black knob on the V-Band until it is as tight as possible.

13. Turn on water going to the Drinking Water System (unit) and start the flow of water through the unit.
14. Allow water to run through the unit faucet for about 5 minutes so that all air can escape.

# Instructions for Changing Your Filter

15. Then turn off the water to the spout/faucet. A small quantity of water may flow from the housing spout/faucet for about 10 to 20 seconds after you shut off water.
16. Check all connections to confirm that there are no leaks.
17. Flush the filter and charge the carbon by allowing water to run to waste for about twenty (20) minutes.
18. Shut off the flow of water through the Drinking Water System. A small quantity of water may flow from the spout/faucet for about 10 to 20 seconds.
19. Check for leaks.
